INSTRUCTIONS

1. Mark hinge positions – On the gate and the post, mark where the strap leaves and barrel hinge will sit. Typically, one hinge approximately 8" – 12" from top, another approximately 8" – 12" from bottom (Fig. 1).
2. Pre-drill mounting holes – Use a drill bit slightly smaller than your screws (to avoid wood splitting) (Fig. 2).
3. Attach hinge to post (leaf side) – Place the strap hinge leaf flat against the gate post. Secure with provided screws or hardware (Fig. 3).
4. Mount hinge to gate (strap side) – Align the strap barrel over the hinge pin or leaf on the post side. Secure the strap into the gate, ensuring it's flush and aligned (Fig. 4).
5. Check alignment & swing – Open and close the gate several times to ensure smooth operation without binding. Adjust as needed by loosening screws and shifting slightly.
6. Secure all fasteners tightly – Once alignment is confirmed, torque or tighten screws fully.
