INFORMATION

INSTRUCTIONS

1. Mount one hinge 6" – 8" from the top of the gate and the second 6" – 8" from the bottom, or evenly spaced depending on gate height (Fig. 1).
2. Mark the screw holes (Hold the long hinge strap flush with the gate and the tee plate against the post).
3. Drill small pilot holes — especially important for hardwoods or thick treated lumber.
4. Secure the hinges and attach the strap to the gate and tee plate to the post using the included 5/16" × 1-3/4" lag screws.
5. Tighten and test gate operation.
